Mission Statement-

GET Global Group provides services & solutions for the key resources utilized in operations in the Energy industry- Expertise, Spares & Supplies and Equipment. Leveraging innovative information technology, robust processes, deep industry knowledge and on-ground presence, we deliver customised turnkey solutions to our clients to help them achieve operational efficiency, flexibility, local content, cost reduction and risk management. GET is also playing a significant role in helping the energy transition by providing renewable power solutions to our clients to aid in decarbonising their operations.

Vision Statement-

GET Global Group aims to be a significant player in making energy more sustainable by increasing the effectiveness of oilfield operations while also reducing their carbon impact.

About GET Global

GET Global Group provides turnkey solutions for key OPEX elements of the upstream oil & gas industry. Our outsourced solutions provide support for Oilfield Operations through Expertise-Based Services, Procurement and Supply Chain Management Solutions, and Integrated Maintenance Services.

Through our Integrated Expert based services and Training services, global workforce, and comprehensive Competency Management Systems, we deploy the right expertise, at the right time and right cost to deliver efficiency, cost-effectiveness, and operational flexibility to clients.

With our Vendor Managed Inventory service, we assume the responsibility for the end-to-end management of, as well as decisions regarding product inventory, utilizing demand information from our clients, enabling them to optimize costs while ensuring operations have critical spares. Through our knowledge of all types of oilfield equipment and components and our vast ecosystem of local workshops in countries across the MENA region, we provide a single window for all scheduled and urgent maintenance and repair.

We also support our clients across MENA in the constructing and maintaining customized solar plants to support oilfield operations and thereby decarbonizing their operational footprint.

Our people

At GET Global, we bring together the right people, with the right mind-set and the right combination of knowledge, expertise and skills to drive change, innovate and implement sustainable solutions that drive value for our upstream oil and gas clients.

Our people-centric approach puts the welfare of our clients, employees and contractual workforce at the core of all our operations, processes and functions.

Staying true to our principles and values, we strive to attract and retain the best talent from all backgrounds. Our workforce is reflective of the diverse world in which we live. By following diversity and inclusion and investing in employee well-being, we empower our people who, in turn, deliver value to our clients.

To unlock potential, we invest in continuous training of our workforce, keeping them updated to the latest knowledge, skills and capabilities, thereby, providing them the much-needed support to meet their professional aspirations, meet organizational goals, and service our clients with innovative solutions with best-in-class practices.

Services

Expertise Based Services:

Our Expertise Based Services are customizable and cover the entire human resource life-cycle. We source the right expertise for our clients, and eliminate multiple vendors and internal interfaces, thereby reducing operational risk and improving operational efficiencies.

Our turnkey Expertise-Based Services include:

**Integrated Crew
Services (ICS)**

**Technical Training
Solutions**

**Technical
Consulting**

Integrated Crew Management (ICS)

Our highly customizable, flexible and comprehensive integrated crew management solutions cover the entire human resource lifecycle from identifying and recruiting to training and deployment, in compliance with industry standards and regulations.

Service features:

- Turnkey deployment, monitoring & management of operation and maintenance teams onsite
- Backed by offsite team providing technical assessment, service quality support and mentoring
- Managed by on-ground project team with complete support on logistics and visas
- Full HSE induction and management, incident investigation and emergency response

Value Proposition

Technical Training Solutions

E-learning:

Online courses get delivered via our proprietary LMS, GET Learning, and cover virtually every technical discipline, learning style, and level of competency, from basic awareness through mastery.

Classroom-based training:

Customized to learning styles and level of competency, our private, on-site classroom-based training is provided at the client's location of choice.

Instructor-led virtual classroom:

Our industry-leading subject experts provide customized programs and solutions, including technical coaching and mentoring to close skill and knowledge gaps, and educate new workforces.

On-the-job training:

The training is based on up-to-date functional competency models and job frameworks, and addresses local skills' needs across levels and geographies.

Blended learning:

The courses combine self-paced online training with virtual instructor-led sessions, and on-the-job training at operational sites to reduce time to competency and travel expenses.

Local content training:

Aligned with the strong local mandates and organization-specific competency needs, our local content training is designed to equip local recruits with industry-specific skills to perform and succeed in the highly competitive oil and gas sector.

Technical Consulting

Oil Field Development: We provide specialized technical consulting services including geophysics, geology, production engineering, reservoir engineering, and drilling engineering, employing the most up-to-date techniques, procedures and tools throughout the lifecycle from exploration to abandonment.

Capacity Building: We offer tailored oilfield training courses along with soft skills development such as teamwork, career development, performance management, and conflict resolution.

Environmental, Social, and Governance (ESG): We have devised and implemented a proven model that helps us to assess and implement all aspects of ESG governance, thereby contributing to the greater good while also attracting ongoing investment and talent, and driving sustainable growth.

Exploration Strategy: Our exploration strategy covers the complete spectrum from Technical Reviews and Recommendations on petroleum systems, exploration and appraisal planning, well proposals and evaluations, through to exploration license evaluation and resource estimations.

Procurement and Supply Chain Management (PSCM)

We use technology to analyze consumption patterns, set min/max stock levels and reorder quantities, and then leverage our existing supplier base to secure optimum prices for our clients. We also manage warehousing and logistics ensuring our clients always have access to what they need, but only pay for what and when they use it.

Vendor Managed Inventory (VMI)

We provide tailored services, coupled with dedicated support in each area: assessment, procurement, sourcing, warehousing, and logistics. Our Vendor Managed Inventory or standalone services include:

Right-Sizing the Inventory: We leverage smart advanced analytics, cutting-edge platforms, and domain experts to glean insights for intelligent data-driven decision-making.

Warehousing: We design, run, improve and manage numerous warehouses to ensure a seamless flow of products from source to destination.

Logistics: We offer dedicated service for each step of the supply chain process from the safe and efficient transportation of oil & gas products to international projects.

Integrated Maintenance Services

Equipment maintenance is a core activity for most organizations since it directly impacts the service quality that can be delivered to clients. GET's cost-effective, third-party Integrated Maintenance Services reduce costs and drive efficiencies. We offer a one-stop-shop for a large part of planned and unplanned maintenance needs of our clients, enabling them to focus on the core aspects of their business.

Our maintenance experts:

- ▶ Assess the condition of incoming equipment
- ▶ Direct the equipment to the appropriate pre-approved vendors
- ▶ Manage the logistics to/from and among them
- ▶ Inspect and control the quality of each vendor's work across the chain
- ▶ Certify the end result and deliver the repaired equipment back to client operation with all supporting paperwork and one single invoice.

Tank Maintenance Services

- Inspection (Visual, MPI, Spark test, Hydro test, Lifting points, Wall thickness test)
- Cleaning (Confined space entry using Breathing Apparatus set, Internal cleaning by Hydro Jetting, Waste disposal using Super Sucker/Vacuum truck)
- Repair (Relining of corrosion protective lining for tank and manifold, welding repairs on tank, repair/replacement of hatches, gaskets, valves, railings, etc.)
- Calibration/recertification (Calibration of Pressure gauges, differential pressure gauges and PRVs of Nitrogen tanks)

Workshop Maintenance Services

Achieve maximum value from your offshore assets by minimizing downtime. We get the job done fast - without interfering with your operations. These include-

- Machining
- Fabrication
- Welding
- Calibration and recertification
- Vehicle service and maintenance
- Electrical maintenance
- Engine service & repairs
- Hydraulic hoses replacement
- Hydraulic maintenance & repairs
- Frac tank maintenance
- Radiator service and repairs
- Flange machining and recertification
- A/C repairs
- Inspection services
- Painting
- Miscellaneous services
